The report requires updating with new data and is sent in 48 hours after order is placed.

The global Natural Refrigerants market size is predicted to grow from US$ 2031 million in 2025 to US$ 3120 million in 2031; it is expected to grow at a CAGR of 7.4% from 2025 to 2031.

Natural refrigerants are natural substances that serve as refrigerants in refrigeration systems (including refrigerators, HVAC, and air conditioning). They are alternatives to hydrofluorocarbon (HFC), hydro chlorofluorocarbon (HCFC) and chlorofluorocarbon (CFC) based refrigerants. Unlike other refrigerants, they are not synthetic chemicals and can sometimes be found in nature. Natural refrigerants are chemicals which occur in nature's bio-chemical processes. They do not deplete the ozone layer and make a negligible - or zero in the case of R717 (ammonia) - contribution to global warming. The high efficiency of natural refrigerants also means that they make a lower indirect contribution to global warming. They are not only used due to environmental sustainability as some applications are better suited to a particular natural refrigerant. This report studies the global Natural Refrigerants market.

The major players in global Natural Refrigerants market include Linde Group, Puyang Zhongwei, Airgas, etc. The top 3 players occupy about 50% shares of the global market. Europe and North America are main markets, they occupy about 65% of the global market. Hydrocarbons (R-290, R-1270, R-600a, etc.) is the main type, with a share about 60%. Air Conditioning is the main application, which holds a share about 60%.

The natural refrigerant market has shown a significant growth trend in recent years, mainly driven by environmental regulations, technological advances and consumer demand for sustainable development. Global environmental policies and regulations

(such as the Montreal Protocol and the Kigali Amendment) restrict the use of high global warming potential (GWP) refrigerants. This has led to an increase in demand for natural refrigerants such as carbon dioxide, ammonia and hydrocarbons. Natural refrigerants have a low or zero GWP and therefore meet the requirements of these regulations. As consumers become more environmentally conscious, more and more brands and companies are beginning to pay attention to the environmental performance of refrigeration equipment. Natural refrigerants have become the first choice due to their zero damage to the ozone layer and lower greenhouse gas emissions, especially in industries such as retail, food processing, and transportation.
