Natural Vanillin ex-Eugenol is a natural-grade vanillin produced from eugenol extracted from clove oil through chemical or enzymatic conversion. Considered a natural equivalent, it is widely used in the flavoring of high-end food, beverages, cosmetics, and daily chemical products due to its pure aroma, rich fragrance, and environmentally friendly production process.

The core upstream raw material is clove oil (mainly produced in Indonesia and Madagascar), with an eugenol content typically exceeding 70%. The midstream stage involves purification and sensory grading. Because products derived from eugenol often retain trace amounts of 'spicy and medicinal' residues, midstream companies utilize molecular distillation and multiple crystallization technologies to ensure that the product maintains both naturalness and extremely high aroma purity.

Global sales in 2025 were approximately 3,500 tons, with an average selling price of US\$6,900 per ton. The industry's gross profit margin is between 30% and 40%.
