A Natural Ventilation Solution refers to a method of ventilating indoor spaces using natural airflow mechanisms rather than relying solely on mechanical systems such as air conditioning or exhaust fans. This approach leverages natural phenomena such as wind and temperature differentials to circulate air within a building, helping to maintain indoor air quality and regulate temperature. Natural ventilation solutions can include features such as strategically placed windows, vents, or openings designed to facilitate the flow of fresh air into the building while allowing stale air to exit. By harnessing natural airflow, these solutions can reduce energy consumption and create a healthier and more comfortable indoor environment.

The global Natural Ventilation Solution market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
