The report requires updating with new data and is sent in 48 hours after order is placed.

Naval brass is a type of special brass made by adding a small amount of tin (about 1%) to 64 brass (a copper alloy consisting of 60% copper and 40% zinc). It is also called naval brass because of its high resistance to seawater and is mainly used for ships and in the chemical industry.

Admiralty brass, which is made by adding tin and arsenic to C73 brass, is also known as a special brass with tin added. However, its use in Japan is limited due to its inferior resistance to corrosion compared to aluminum brass (Alblac) to which aluminum is added.

The global Naval Brass market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
