A naval nuclear submarine is a submarine that is propelled by a nuclear reactor, rather than traditional diesel engines or batteries. Nuclear submarines are capable of remaining submerged for extended periods of time, as they do not need to surface to recharge batteries or to exchange air. This stealth capability, along with their high speed and range, makes nuclear submarines an important asset in naval fleets, especially for strategic operations and intelligence gathering.

The global Naval Nuclear Submarine market size is projected to grow from US\$ million in 2023 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
