The global Navy Vessel Degaussing System market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

A Navy vessel degaussing system is a specialized technology used on naval ships to reduce or counteract the ship's magnetic signature. This system is essential because ships, especially those with metal hulls, can develop a magnetic field as they travel through the Earth's magnetic field. This magnetic signature can make them more detectable to magnetic-sensitive devices, such as naval mines or enemy detection systems.
