The global NB-IoT Smart Gas Meters market size is predicted to grow from US\$ 2063 million in 2025 to US\$ 3160 million in 2031; it is expected to grow at a CAGR of 7.4% from 2025 to 2031.

The NB-IoT smart gas meter is an upgraded product after adding a smart module to the membrane gas meter. The technical barriers are higher than that of the membrane gas meter, so the gross profit margin is higher than that of the membrane gas meter. Compared with GPRS communication technology, NB-IoT has the characteristics of wide coverage, high gain, large connection, and low power consumption. It is widely used in utilities, smart cities, mobile payment and other scenarios. In recent years, the application of NB-IoT gas meters has improved the gross profit margin of smart gas meter manufacturers.

According to our research, the number of global connected IoT devices was about 14 billion, grew by 18% compared to 2021. The data released by the Office of the Central Cyberspace Affairs Commission shows that, by the end of 2022, China has built and opened a total of 2.3 million 5G base stations. 110 cities across the country have reached the gigabit city construction standards. Gigabit optical network has the ability to cover more than 500 million households. IPv6 scale deployment application is deeply promoted. The number of active users exceeds 700 million, mobile network IPv6 traffic accounted for nearly 50%. The total size of China's data center racks exceeds 6.5 million standard racks, with an average annual growth rate of more than 30% in the past five years.
