The global NCMA Cathode Material market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

The co-doping of Ai and Mn in NCMA materials effectively suppresses the volume expansion of the material during charging, reduces the occurrence of internal cracks in the secondary particles, and reduces the erosion of the secondary particles by the electrolyte, thereby significantly improving the cycle time. performance, and also maintains the high capacity characteristics very well. Therefore, NCMA material is an ideal cathode material and has broad market prospects.
