**The report requires updating with new data and is sent in 48 hours after order is placed.**

The global Near-Eye Display System market size is predicted to grow from US$ 2370 million in 2025 to US$ 5261 million in 2031; it is expected to grow at a CAGR of 14.2% from 2025 to 2031.

Near Eye Displays (NED), also known as head mounted displays (HMD) or wearable displays, create a virtual image in the field of view of one or both eyes. To the eye, the virtual image appears at a distance and appears much larger than the relatively small display panel and optics used to create the image.

The near-eye display system market was experiencing significant growth and technological advancements. Near-eye display systems refer to display devices that are worn or positioned close to the user's eyes, typically used in applications such as virtual reality (VR), augmented reality (AR), and mixed reality (MR) experiences. These systems provide immersive visual content, allowing users to see virtual objects superimposed on the real world or enter fully immersive virtual environments.
