The global Near Field Communication Systems market size is predicted to grow from US\$ 31940 million in 2025 to US\$ 68610 million in 2031; it is expected to grow at a CAGR of 13.6% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Near Field Communication (NFC) is an emerging technology. Devices using NFC technology (such as mobile phones) can exchange data when they are close to each other. It is powered by non-contact radio frequency identification (RFID).) and interconnection technology integration, by integrating the functions of inductive card readers, inductive cards and point-to-point communication on a single chip, mobile terminals are used to realize mobile payment, electronic ticketing, access control, mobile identity recognition, and anti-counterfeiting. and other applications.

The definite growth in NFC market revenue can be attributed to the growing trend of mobile commerce. NFC, GPS, and universal barcodes are the three major technologies used in mobile commerce. The term near field communication or NFC refers to the use of radio waves to transmit payment information. Transferring from one device to another only takes a few centimeters to work. The trend of smartphones becoming all-in-one devices that meet the various needs of modern consumers will naturally extend with the development of digital wallets. Consumers can decide not to carry a wallet and start paying exclusively with their smartphone, which is operationally convenient.

The increasing popularity of wearable technology is another factor driving market

revenue growth. Owing to the rapid development of the sports industry and the rising trend of users using activity trackers, the adoption of more advanced wearable technologies is increasing. Wi-Fi and Bluetooth built-in connectivity technologies are increasingly integrated with near field communication (NFC) and wireless charging technology in wristbands, using EMVCO compliant technology for contactless payments via NFC. It's obviously convenient to be able to shop without having to pull out your wallet, or to go out for a run without taking your phone or wallet.
