The report requires updating with new data and is sent in 48 hours after order is placed.

Many substances absorb infrared energy at certain wavelengths and do not absorb infrared energy at other wavelengths. When measuring the water content of the substance being tested, a minimum of two wavelengths should be selected. One is the reference wavelength, which is not strongly absorbed by the substance under test or by water. The other is the measurement wavelength, which is not strongly absorbed by the substance under test, but is strongly absorbed by water. The instrument uses precision infrared filters mounted on a wheel.
