## Abstracts

The global Nectin-4-Directed Antibody Drug Conjugates (ADC) market size is predicted to grow from US\$ 1746 million in 2025 to US\$ 3330 million in 2032; it is expected to grow at a CAGR of 9.6% from 2026 to 2032.

In 2025, global Nectin-4-Directed Antibody Drug Conjugates (ADC) production reached approximately 961 K Units, with an average global market price of around 1857 USD per Unit.

Nectin-4-directed antibody-drug conjugates (ADCs) are targeted cancer therapies in which a monoclonal antibody that specifically binds the cell-surface protein Nectin-4 (PVRL4) is chemically linked (via a linker) to a cytotoxic payload. After the antibody binds Nectin-4 on tumor cells, the ADC is typically internalized, the linker is cleaved (or the antibody is degraded), and the payload is released inside the cell to kill the cancer cell .

Nectin-4-directed antibody-drug conjugates (ADCs) stand out because they combine a clinically validated tumor-associated target with the precision of antibody binding and the potency of a cytotoxic payload, addressing one of oncology's most persistent pain points: how to deliver strong cell-killing therapy while limiting the broad, systemic damage seen with traditional chemotherapy. By exploiting Nectin-4 expression on certain epithelial tumors, these ADCs can concentrate drug exposure in malignant tissue, potentially improving the therapeutic window, enabling meaningful activity in patients who have exhausted standard options, and creating room for rational combinations that deepen and extend responses without simply escalating toxicity. The industry tailwinds are strong: continued demand for differentiated, high-value oncology assets; rapid maturation of linker and payload technologies that can fine-tune efficacy

and tolerability; growing confidence from regulators and clinicians as ADC know-how improves; and a clear commercial incentive to develop targeted therapies that fit biomarker-driven treatment pathways and expand into earlier lines of therapy. Looking ahead, the Nectin-4 ADC space is evolving from a single-product story into a competitive innovation arena where next-generation designs aim to improve safety profiles, broaden eligible patient populations, and prove durability across additional tumor types, making it a compelling segment of the broader ADC market with credible momentum and a runway for sustained growth as clinical experience, manufacturing scale, and combination strategies continue to mature.

The upstream raw materials for Nectin-4-Directed Antibody Drug Conjugates (ADCs) mainly include antibodies, payloads, linkers, etc. Typical suppliers include Thermo Fisher, Merck, WuXi XDC, Porton, etc. The downstream applications are mainly in the treatment of diseases such as urothelial carcinoma, esophageal cancer, and triple-negative breast cancer.

The production capacity of Nectin-4-Directed Antibody Drug Conjugates (ADCs) varies greatly depending on the scale of antibody expression, the level of conjugation technology, and the formulation filling capacity. The gross profit margin of Nectin-4-Directed Antibody Drug Conjugates (ADCs) is in the range of 70%-80%.

United States market for Nectin-4-Directed Antibody Drug Conjugates (ADC) is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
