A needle roller bearing is a bearing that uses small cylindrical rollers. These rollers are used to reduce friction of a rotating surface. Compared to ball bearings, needle roller bearings have a large surface area that is in contact with the bearing raceway journals.

The typical structure of a needle roller bearing comprises an inner race (or sometimes just a shaft), a needle cage which orients and contains the needle rollers, the needle rollers themselves, and an outer raceway. There are many different designs of needle roller bearing, including drawn cup, precision race, caged roller, and thrust roller.

The major producers in this industry are Schaeffler, NSK and SKF, accounting for 16.60%, 12.27% and 10.98% of the market, respectively.
