The global Needle Roller Thrust Bearings for Automobile market size is predicted to grow from US\$ 616 million in 2025 to US\$ 1015 million in 2032; it is expected to grow at a CAGR of 7.5% from 2026 to 2032.

Needle roller thrust bearings use a cage and needle roller assembly. The case-hardened cage is made of two precision pressed steel plates. The rollers are firmly fixed in the cage and can rotate smoothly even under large axial loads. These bearings are very small, so they can easily replace traditional thrust washers in the same installation space. In the automotive industry, this bearing is often used in planetary gears, constant mesh gearboxes, torque converters, etc.

The market for Needle Roller Thrust Bearings in the automobile sector is witnessing growth due to the increasing demand for lightweight, compact, and high-performance components that enhance vehicle efficiency and durability. These bearings are widely used in transmissions, gearboxes, and drivetrain systems to manage high axial loads with minimal friction and space requirements. The global shift toward electric and hybrid vehicles further boosts demand, as these vehicles require advanced bearing solutions for enhanced energy efficiency and reduced weight. Technological advancements in materials and designs, such as improved heat resistance and longer service life, are driving innovation in this market. However, challenges include the need for precise manufacturing processes and competition from alternative bearing types. Regional markets in Asia-Pacific, particularly China and India, are expanding due to robust automotive production, while North America and Europe remain key players with a focus on technological advancements and sustainability.
