The working principle of the negative-ion beauty instrument is to atomize the water on the surface of the skin to generate negative ions, thereby opening the pores and promoting the discharge of cuticles and waste in the pores, so as to achieve the purpose of deep cleansing the skin. The pores are opened and in a clean state, the absorption capacity is enhanced, and the subsequent use of skin care products will have better maintenance effects. However, the actual effect of this interactive flow of positive and negative ions is difficult to predict.
