A negative-pressure mask, or respirator, is a mask where there is an air pressure on the inside of the facepiece. This pressure is in the negative in respect to pressure outside the mask during inhalation process. A negative-pressure mask utilizes chemical media and mechanical filters to ensure that the user is not breathing in tainted air.

Dust masks can also be classified as negative-pressure respirators or masks if they incorporate a seal. However, it is to be noted that the inexpensive dust, pollen masks, and other loosely-fitting masks that are found at drug stores are not considered negative-pressure respirators.
