According to our (LP Info Research) latest study, the global Negative Pressure Helium Detector market size was valued at US\$ million in 2022. With growing demand in downstream market and recovery from influence of COVID-19 and the Russia-Ukraine War, the Negative Pressure Helium Detector is forecast to a readjusted size of US\$ million by 2029 with a CAGR of % during review period.

The research report highlights the growth potential of the global Negative Pressure Helium Detector market. With recovery from influence of COVID-19 and the Russia-Ukraine War, Negative Pressure Helium Detector are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Negative Pressure Helium Detector. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Negative Pressure Helium Detector market.

Negative pressure helium detector is a device used to test the sealing performance of lithium-ion batteries. Compared with positive pressure helium detectors, negative pressure helium detectors use a negative pressure environment for detection, that is, helium gas detection is carried out in a certain vacuum environment. The working principle of a negative pressure helium detector is to immerse a lithium-ion battery in helium gas in a negative pressure environment, and determine the sealing performance of the battery by detecting the leakage of helium gas. When there is a leak or defect in the battery, helium gas will penetrate into the interior of the battery, and the leakage

point can be quickly detected and located through detection equipment. The advantage of negative pressure helium detectors is that they can detect smaller leaks. For applications with higher sealing requirements for lithium-ion batteries, such as new energy vehicles, aerospace, and other fields, negative pressure helium detectors can provide more accurate and reliable detection results. It should be noted that the negative pressure helium detector needs to maintain a certain vacuum environment during use, so the operation and maintenance requirements of the equipment are relatively high, and the equipment cost is also high.
