The global Neon Panel Lights market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Neon panel indicator light is a kind of indicator light that uses neon gas discharge to generate light. It is usually used in electrical equipment, instrumentation, control panels, etc. to indicate the status, operating status, and warning information of the equipment. The working principle of the neon panel indicator light is to use the discharge phenomenon of neon gas. When the current passes through the neon gas, the neon gas will discharge and produce bright light. The neon panel indicator light is usually composed of a neon tube and a corresponding circuit. The circuit provides appropriate voltage and current to discharge the neon tube and produce bright light. Neon panel indicators usually use neon tubes of different colors, such as red, green, yellow, etc., as well as different tube shapes and brightness, to meet different indication requirements.

Neon panel indicators were widely used in various electrical equipment and instruments in the past, such as televisions, refrigerators, air conditioners, electronic clocks, industrial control panels, etc. However, with the continuous development and popularization of LED technology, LED indicators have gradually replaced neon panel indicators, because LED indicators have the advantages of lower energy consumption, longer life, richer colors and lighting effects. Despite this, neon panel lights are still widely used in certain applications and retain a certain market share in some nostalgic or retro designs.

United States market for Neon Panel Lights is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Neon Panel Lights is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
