The global Neonatal Invasive Ventilator market size is predicted to grow from US\$ 156 million in 2025 to US\$ 220 million in 2031; it is expected to grow at a CAGR of 5.9% from 2025 to 2031.

Neonatal ventilators provide ventilator support to preterm and critically ill infants who suffer from respiratory failure and who generally have low-compliance lungs, small tidal volumes, high airway resistance, and high respiratory rates. Neonatal Invasive Ventilator is the ventilator with invasive.

The global neonatal intensive care market is projected to gain growth on the back of the increasing complications in newborns and the need to detect and monitor them. The rising count of preemies could be a major factor supplementing the demand for neonatal intensive care. Furthermore, the magnifying birthrate in emerging nations is envisaged to tellingly increase the growth of the market. The most recently, the impact of Covid-19 is driving the demand of Neonatal Invasive Ventilator worldwide. In total, technological advancements with respect to ventilators and rise in awareness among healthcare professionals about these devices are the key factors that augment the market growth. Moreover, the rise in disposable income and improvements in healthcare settings boost the market. However, disadvantages of neonatal ventilators such as air leaks, sinus congestion, gastric distention, and other problems impede the growth of the market.
