A Neonatal Noninvasive Positive Pressure Ventilator (NIPPV) is a medical device designed to support the breathing of premature or critically ill newborns without the need for intubation. It delivers air or oxygen to the infant's lungs through a nasal mask or prongs, helping to maintain adequate ventilation and oxygenation. NIPPV is commonly used in neonatal intensive care units (NICUs) to treat conditions such as respiratory distress syndrome, apnea of prematurity, and other respiratory disorders, promoting better outcomes and reducing the need for invasive mechanical ventilation.
