Neonicotinoid low-toxic insecticides are insecticides with neonicotinoid compounds as active ingredients, which have low toxicity and high effectiveness. This type of insecticide acts on the nervous system of pests, causing paralysis and death. It is less toxic to non-target organisms and has relatively little impact on the environment. This type of insecticide is widely used in agricultural production to control various pests, such as aphids, whiteflies, leafhoppers, etc., providing a relatively safe and effective option for crop protection.

The global Neonicotinoid Low-Toxic Insecticide market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.

Neonicotinoid low-toxic insecticides play an important role in modern agriculture. Their low toxicity and high efficiency make them an ideal choice to replace traditional highly toxic insecticides such as organophosphates and carbamates, helping to reduce adverse effects on the environment and ecosystems and protect ecological balance. However, although these insecticides are less toxic to non-target organisms, they still need to be used with caution to avoid adverse effects on beneficial insects and ecosystems. Therefore, balancing the relationship between agricultural production and environmental protection is an issue that needs to be focused on and addressed in future development.
