## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

A new type of material, by setting two steel sheets on both wings of the rubber waterstop, can effectively solve the problem that the thermal expansion and contraction of rubber and concrete are not synchronized. Neoprene waterstop belt is generally set together with structural deformation joints or initiation joints, which can not only achieve the purpose of stopping water, but also withstand the dislocation of adjacent plates within about 40mm without pulling cracks, thereby strengthening the play of water-stopping performance.

The global market for Neoprene Waterstop is estimated to increase from US\$ million in 2021 to reach US\$ million by 2028, exhibiting a CAGR of % during 2022-2028. Keeping in mind the uncertainties of COVID-19 and Russia-Ukraine War, we are continuously tracking and evaluating the direct as well as the indirect influence of the pandemic on different end use sectors. These insights are included in the report as a major market contributor.
