A nephrostomy balloon dilation catheter is a medical device used in urology procedures to dilate or widen a narrowed or blocked ureter or renal pelvis. It consists of a catheter with an inflatable balloon at the tip. The catheter is inserted into the kidney through a small incision in the skin, and the balloon is then inflated to dilate the narrowed area. This allows for improved urine flow and drainage from the kidney. The catheter may be left in place temporarily or permanently, depending on the specific medical condition being treated.
