A nephrostomy guidewire is a medical device used in nephrostomy procedures to guide and position the nephrostomy catheter during surgery. A nephrostomy is a surgical procedure used to create a channel connecting the kidneys to the surface of the body for drainage of urine. During the operation, the doctor needs to guide and position the nephrostomy catheter through a guidewire to ensure that the operation proceeds smoothly. Nephrostomy guidewires are usually made of soft but strong material, such as plastic or wire. They are strong and flexible enough to travel within catheter channels and can be visualized and positioned using methods such as X-ray imaging. Guidewires usually have a sharp tip at one end to facilitate penetration of tissue during puncture and guidance.
