Neratinib is a protein kinase inhibitor used to treat breast cancer that over expresses the HER2 receptor. It blocks the action of a protein called HER2, which can help tumors grow and spread. Neratinib is available in different tablet forms, such as 40mg/180 tablets, 40mg/150 tablets, and 40mg/90 tablets.

The global Neratinib market is expected to grow at a CAGR of 6.5% from 2022 to 20303. The growth in the market can be attributed to the increasing incidence of breast cancer, rising awareness about early diagnosis and treatment of breast cancer, and technological advancements in the field of oncology. Some of the key factors driving the market are the approval of Neratinib for other applications such as gastrointestinal stromal tumor and lung cancer, the launch of generic versions of Neratinib, and the expansion of the market in emerging regions such as Asia Pacific and Latin America.
