Nerve repair, also known as neuroregeneration, is defined as the repair or regrowth of nervous tissues, and cells through the generation of new neurons, axons, synapses, and myelin. Nerve repair and regeneration offers products such as neurostimulation, neuromodulator, and biomaterial devices. These devices are used to treat traumatic or neurodegenerative disorders such as Alzheimer's disease, Parkinson's disease, amyotrophic lateral sclerosis, multiple sclerosis, and multiple system atrophy. The brain, spinal cord, and peripheral nerves are fragile in nature & easily damaged, and hence can interfere with the brain's ability to communicate with muscles and organs. Nerve repair and regeneration products repair these damages.

The global Nerve Repair and Regeneration Devices market size is projected to grow from US\$ 6956 million in 2024 to US\$ 10350 million in 2030; it is expected to grow at a CAGR of 6.8% from 2024 to 2030.

The nerve repair and regeneration market opportunity are increased as in developing countries; the expenditure on healthcare is on a continuous rise. The surge in awareness for the use of nerve repair and regeneration devices to manage conditions, such as Alzheimer's disease, Parkinson's disease, and other neurological disorders globally, is expected to promote market growth. Furthermore, a rise in awareness among people about clinical treatments such as immune response & neuroregeneration, spinal cord repair, peripheral nerve regeneration & repair, and nerve cell regrowth is anticipated to expand the nerve repair and regeneration market. High cost associated with the devices such as neurostimulator devices, the procedure, and dearth of skilled professionals for the utilization of devices is expected to restrict the Nerve Regeneration Market growth during the forecast period.
