The global Net Abrasive Discs market size is predicted to grow from US$ 228 million in 2025 to US$ 379 million in 2032; it is expected to grow at a CAGR of 7.7% from 2026 to 2032.

In 2024, global sales of net abrasive discs will reach approximately 250 million pieces, with an average price of approximately US$0.87. Net abrasive discs are a type of high-performance flexible abrasive with an open fiber mesh structure. The sand particles are evenly bonded to the mesh substrate via resin, enabling efficient dust removal, wear resistance, and anti-clogging during the grinding process. They are commonly used in applications such as wood sanding, car refinishing, metal polishing, and coating. Compared to traditional sandpaper, net abrasive discs offer higher processing efficiency, longer lifespan, and can be used in conjunction with vacuum systems to significantly reduce dust pollution. Their upstream supply relies on the production and supply of abrasive particles (such as aluminum oxide and silicon carbide), fiber mesh substrates, and resin binders. Their downstream applications are widely used in furniture manufacturing, car refinishing, architectural decoration, metal processing, and home DIY markets.
