The global Net of Vehicles Access Gateway market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

Net of Vehicles Access Gateway (NVAG) is a networking device that enables communication between vehicles and other devices within a connected vehicle ecosystem. It serves as a central hub that collects and processes data from various onboard sensors and systems, as well as from other vehicles and road infrastructure, and routes this information to other connected devices or back to a central network. NVAGs typically include wireless communication modules, such as cellular or Wi-Fi, to facilitate data exchange and may also include processing capabilities to analyze and interpret the data. NVAGs play a crucial role in enabling vehicle-to-vehicle (V2V) and vehicle-to-infrastructure (V2I) communication, which are essential for advanced driver-assistance systems (ADAS) and autonomous vehicle technologies.

The industry trend for Net of Vehicles Access Gateways (NVAGs) is experiencing significant growth driven by the increasing adoption of connected and autonomous vehicle technologies. As the number of connected vehicles on the road increases, there is a growing need for efficient and reliable communication between vehicles, road infrastructure, and other connected devices. NVAGs play a critical role in enabling this communication and are therefore in high demand. Additionally, the development of new communication technologies, such as 5G, is expected to further drive the adoption of NVAGs by enabling faster and more reliable data exchange between vehicles and other connected devices. As autonomous vehicle technologies continue to advance, NVAGs

will become increasingly important in ensuring the safety and efficiency of these advanced driving systems.
