The global Network Interface Unit market size is predicted to grow from US\$ 5813 million in 2025 to US\$ 9922 million in 2032; it is expected to grow at a CAGR of 8.1% from 2026 to 2032.

A network interface device (NID), also called network interface unit (NIU), is an interface between the network provider's local loop and the customer. These are present as grey boxes outside customer's premises, where the data wires of the phone company or the network provider ends and the customer's wiring begins.

At present, the global communications industry is developing rapidly, with new technology highlights such as meta-universe, 5G, cloud technology application, artificial intelligence and big data, etc., which have become the main driving force for the rapid updating and iteration of the communications industry. From the perspective of competition, the industry concentration of each segment of the global communications industry is relatively high at present, and the leading companies are mainly concentrated in China and the United States. And as the R&D investment of the leading companies increases, and the related technology development becomes more and more mature, the healthy competition and cooperation among the enterprises is expected to boost the scale of the global communications industry to further increase. According to our research, the global communications industry market size in 2022 will be about 286.1 billion U.S. dollars.
