The global Network Operations Center as a Service(NOC as a Service) market size is predicted to grow from US$ 1277 million in 2025 to US$ 2186 million in 2032; it is expected to grow at a CAGR of 8.1% from 2026 to 2032.

Network Operations Center as a Service (NOC as a Service) is a service model in which enterprises outsource the ongoing monitoring, management, and maintenance of their IT infrastructure (including networks, systems, cloud resources, and applications) to a professional third-party team. This team acts as the enterprise's external NOC, leveraging advanced technology platforms and standardized processes to provide 24/7 proactive operations support. Its core value lies in enabling enterprises to gain enterprise-grade operations capabilities without the expense of building their own NOC team, which requires expensive hardware, specialized software, and experienced engineers. The service provider uses a centralized monitoring platform to detect performance indicators, security threats, and fault alerts in real time. Following predefined workflows, the service provider conducts incident response, troubleshooting, and remediation, ensuring that the availability, performance, and security of business systems meet established service level agreements. Essentially, NOC as a Service enables enterprises to focus their resources on core business innovation while expert teams ensure the stability, efficiency, and reliability of their IT environments. It represents a classic strategy for outsourcing operations capabilities and optimizing costs.
