Network Virtualization Software (NV) solves the very specific problem of how to move VMs across different logical domains.

Rather than connecting them in a network, NV creates a tunnel through the existing network to connect two domains. This ability means that network administrators can move VMs independently of their existing infrastructure without having to reconfigure the network.

The global Network Virtualization Software market size is projected to grow from US\$ 583 million in 2023 to US\$ 1325.5 million in 2030; it is expected to grow at a CAGR of 12.4% from 2024 to 2030.
