The report requires updating with new data and is sent in 48 hours after order is placed.

Sound masking is the addition of sound created by special digital generators and distributed by normally unseen speakers through an area to reduce distractions or provide confidentiality where needed.
The sound is broad band random that conveys no information about itself to a listener. It is often referred to erroneously as white noise or pink noise; the sound spectrum and level is specially shaped to provide the degree of privacy desired by occupants.
Masking operates by covering up or masking unwanted sounds, similar to perfume that covers up other odors. This is in contrast to the technique of active noise control which attempts to eliminate the unwanted sound. Sound masking is used in homes, commercial offices, medical facilities, court rooms, and in secure facilities to provide secrecy.
Over the next five years, LPI(LP Information) projects that Networked Sound Masking Systems will register a xx% CAGR in terms of revenue, reach US$ xx million by 2023, from US$ xx million in 2017.
