The global Neuroprotective Drugs market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Neuroprotective Drugs consist of medications that can be used to protect or preserve the neuronal cells of the brain from degeneration, stress, and injury, which can impair cognitive functions.

Factors expected to drive market growth include increasing prevalence of neurological disorders. Neurological diseases are the leading cause of disability and death worldwide. The “big three” neurodegenerative diseases: Alzheimer’s disease, Parkinson’s disease, and amyotrophic lateral sclerosis, have resulted in significant increases in morbidity and mortality in the elderly population worldwide. Neuroprotective drugs are those that help maintain the structure and function of neurons.

Neuroprotective drugs have the potential to reduce stroke deaths by 6 million per year. According to data updated by the World Health Organization in February 2022, approximately 50 million people worldwide suffer from epilepsy every year.

Alzheimer's disease segment is expected to hold major market share in the neuroprotective agents market

The incidence of Alzheimer's disease has been increasing and is expected to continue to increase in the coming decades. According to statistics from the World Health

Organization, nearly 50 million people worldwide were suffering from Alzheimer's disease and other dementias in 2020, and this number is expected to exceed 152 million by 2050. Additionally, Alzheimer's disease progression increases with age and is the fifth largest contributor to the global disease burden, with the global disease burden exceeding 1 Trillions of dollars.
