Neurotech devices refer to medical and wellness technologies designed to interface with the nervous system for the purpose of diagnosis, monitoring, stimulation, or modulation of neural activity. These devices include implantable and non-invasive systems such as deep brain stimulators, spinal cord stimulators, vagus nerve stimulators, transcranial stimulation devices, and neuro-monitoring equipment, serving applications in neurology, psychiatry, pain management, rehabilitation, and cognitive health. From a value chain perspective, upstream activities include electronic components, sensors, electrodes, biocompatible materials, and software algorithms, midstream processes focus on device design, system integration, firmware and algorithm development, clinical validation, and regulatory compliance, while downstream demand is driven by hospitals, neurology clinics, rehabilitation centers, research hospitals, and specialized healthcare providers. In 2025, the average selling price of neurotech devices is approximately US\$9,800 per unit, with global sales volume reaching around 285 thousand units. The industry maintains a gross margin of 55%–72%, supported by high technical barriers, regulatory protection, strong intellectual property portfolios, and long replacement cycles.
