Neutral wood vinegar refers to a liquid with a pH value close to neutral (typically in the range of 6.5-7.5) obtained by neutralizing wood vinegar (a liquid product containing acetic acid generated during the dry distillation or carbonization of wood and other biomass). Its main components include water, alcohols, phenols, ketones and other organic compounds, but the content of acetic acid is significantly reduced. It retains the effective components of wood vinegar while reducing the limitations of acidity on application scenarios, and is commonly used as a synergist, bacteriostatic agent or conditioner in agriculture, daily chemicals, environmental protection and other fields.
