The global Neutron Detection Equipment market size is predicted to grow from US\$ 151 million in 2025 to US\$ 186 million in 2031; it is expected to grow at a CAGR of 3.5% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Neutron detectors consist of materials that interact with neutrons. Although the principle reaction mechanisms of neutrons with matter are limited, the options for detection media are quite numerous. Detectors can consist of solid, liquid, or gas-filled media. Beside the detection mechanism, there is one major challenge for all types of neutron detectors. They all need to be insensible to gamma ray emission or at least require an implemented technique to discriminate between neutron and background gamma ray events, as neutron detection often takes place in a mixed radiation field.

The global top three neutron detector manufacturers include Photonis, Arktis Radiation Detectors, Thermo-Fisher Scientific, with a total market share of more than 40%, of which the largest manufacturer is Photonis, with a market share of more than 18%. The Americas is the global leading consumer market for neutron detectors, with a market share of over 35%. In terms of type, gas proportional detectors have a market share of over 75%. In the application field, the market share of the homeland security field accounts for more than 60%.
