The report requires updating with new data and is sent in 48 hours after order is placed.

In applications such as nuclear reactors, a neutron poison (also called a neutron absorber or a nuclear poison) is a substance with a large neutron absorption cross-section. In such applications, absorbing neutrons is normally an undesirable effect. However, neutron-absorbing materials, also called poisons, are intentionally inserted into some types of reactors in order to lower the high reactivity of their initial fresh fuel load. Some of these poisons deplete as they absorb neutrons during reactor operation, while others remain relatively constant.

The global market for Neutron Poison is estimated to increase from US\$ million in 2021 to reach US\$ million by 2028, exhibiting a CAGR of % during 2022-2028. Keeping in mind the uncertainties of COVID-19 and Russia-Ukraine War, we are continuously tracking and evaluating the direct as well as the indirect influence of the pandemic on different end use sectors. These insights are included in the report as a major market contributor.

The APAC Neutron Poison market is expected at value of US\$ million in 2022 and grow at approximately % CAGR during 2022 and 2028.

The United States Neutron Poison market is expected at value of US\$ million in 2022 and grow at approximately % CAGR during 2022 and 2028.

The Europe Neutron Poison market is expected at value of US\$ million in 2022 and grow at approximately % CAGR during 2022 and 2028.

The China Neutron Poison market is expected at value of US\$ million in 2022 and grow at approximately % CAGR during 2022 and 2028.

Global key Neutron Poison players cover 3M, Holtec International, Nikkeikin Aluminium Core Technology Company, Nippon Yakin Kogyo and MillenniTEK, etc. In terms of revenue, the global largest two companies occupy a share nearly % in 2021.
