The global New Display Technology market size is predicted to grow from US\$ 207744 million in 2025 to US\$ 451954 million in 2032; it is expected to grow at a CAGR of 13.0% from 2026 to 2032.

New display technologies refer to high-definition image reproduction technologies based on chip and device control and utilizing novel optoelectronic materials. These technologies are widely used in wearable devices, automotive displays, virtual reality, and other fields. As cathode ray tube displays (CRTs) are gradually being replaced by flat panel displays (FPDs), new display technologies currently mainly include thin-film transistor liquid crystal displays (TFT-LCDs), quantum dot displays, electronic paper displays, organic light-emitting diode displays (OLEDs), and field emission displays (FETs). Compared to CRTs, new displays offer advantages such as thinness, light weight, low power consumption, low radiation, and flicker-free operation.
