The global New Dry Process Cement Production Line market size is projected to grow from US\$ million in 2022 to US\$ million in 2029; it is expected to grow at a CAGR of % from 2023 to 2029.

Environmental protection and low consumption have become the standard requirement for cement manufacturing. With the development of the construction industry, the cement production process is also constantly improving. The new dry-process cement production line technology was developed in the 1950s, so far, the new dry process cement equipment rate of Japan, Germany, and other developed countries have accounted for 95%. This cement production process regards the suspension preheating and pre decomposition as the core, and has the advantages of small pollution and a high degree of automation. At present, its application scope in cement production is becoming wider and wider.

New Dry Process Cement Production Line refers to a cement production technology that uses modern equipment and processes to produce high-quality cement product with low energy consumption and environmental impact. It generally includes crushing, pre-homogenization, raw material preparation, raw meal grinding, preheating, decomposition, clinker calcination, cement grinding, and packaging. Compared to the traditional cement production process, the New Dry Process Cement Production Line has advantages such as lower energy consumption, higher thermal efficiency, higher production efficiency, and lower pollutant emissions.
