Domains and domain controllers promote the development of automotive electronic and electrical architecture from distributed to centralized, and can achieve rapid function upgrades in the era of electric intelligence. Under the needs of electronic and intelligent development, the traditional distributed architecture has gradually evolved into a domain-centralized architecture, and 'domain' and 'domain controller' have emerged. Domain controllers use multi-core CPU/GPU chips with stronger processing capabilities, introduce Ethernet, and integrate scattered ECUs into domain controllers with stronger computing capabilities to relatively centrally control each domain, thus solving the problems of distributed architecture. Cost, computing power and other limitations.

The global New Energy Automotive Domain Controller market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
