Abstracts

The global New Energy Fracturing Equipment market size is predicted to grow from US$ 6966 million in 2025 to US$ 17970 million in 2032; it is expected to grow at a CAGR of 14.8% from 2026 to 2032.

The main equipment and technologies used in fracturing include vehicle-mounted fracturing equipment, turbine-driven fracturing equipment, fully hydraulically driven fracturing equipment, electric fracturing equipment, and skid-mounted fracturing equipment. Traditional fracturing equipment primarily uses a diesel engine connected to a hydraulic torque converter to drive the pumping device, or a diesel engine to drive a hydraulic system, directly driving the pumping device and mechanical actuators through fluid transmission. This method suffers from drawbacks such as a long drive chain, low transmission efficiency, high emissions, high noise, complex control systems, and low equipment operation quality. Electric fracturing equipment, as a green, clean, and efficient oil and gas extraction device, mainly uses a variable frequency motor to directly drive the pumping device and mechanical actuators, completing the high-quality mixing and pumping of fracturing fluids. It boasts advantages such as high transmission efficiency, low emissions, low noise, simple and precise control, and high operational reliability. Electric fracturing equipment technology aligns with the future trend of green development in national oil and gas fields. New energy fracturing equipment refers to fracturing equipment powered by new energy fuels such as electricity, wellhead gas, LNG, and CNG, replacing traditional diesel engines. In 2024, the global production of New Energy Fracturing Equipment reached 32,129 units, with an average selling price of US$194,000 per unit, a gross profit margin of 35.68%, and an average output of 60 units per unit. Upstream Core Components: Motors, plunger pumps, turbine assemblies, etc.

With the development of the global low-carbon economy, oil and gas development is moving towards high-quality development characterized by green, low-carbon, energy conservation, and emission reduction. Electric fracturing and turbine fracturing, as new energy fracturing equipment, are gradually replacing traditional diesel-driven fracturing equipment, becoming important tools for energy development. According to an industry analysis report by TPH, a US energy strategy analysis and investment company, new fracturing technologies represented by electric fracturing and turbine fracturing have broad prospects, and it is estimated that by 2025, the number of new fracturing trucks will increase to 30% of the total number of fracturing trucks in the United States.
