The air conditioningscroll compressor consists of a fixed involute scroll and an involute moving scroll with eccentric gyration and translation. During the working process, the stationary plate is fixed on the frame, and the moving plate is driven by an eccentric shaft. Driven and controlled by the anti-rotation mechanism, it makes circular motion around the static disk. The gas is sucked into the periphery of the static disk, gradually compressed in several crescent-shaped compression cavities formed by the dynamic and static disks, and then continuously discharged from the axial hole of the central part of the static disk.
