The global New Energy Vehicle Charging App market size is projected to grow from US\$ 5928.2 million in 2022 to US\$ 68990 million in 2029; it is expected to grow at a CAGR of 42.0% from 2023 to 2029.

The development of electric vehicle charging stations for electric vehicles has gained significant momentum over the past decade. Adoption of charging station services for electric vehicles help in reducing the pollution in large population centers, increase customer loyalty, and attract new customers, thereby driving the market growth. The rapidly evolving electric vehicle (EV) market is driving innovation in EV technology and associated infrastructure. Electric vehicles offer multiple advantages such as reduced fuel consumption and decreased emissions from tailpipes, which significantly boost their demand across the globe. This in turn is expected to escalate the need for charging stations for electric vehicles, thereby driving the market growth. Charging stations are being rapidly developed as a part of government initiative programs and EV manufacturers are being involved in the development of charging spots in the parking locations. EV manufacturers are focusing on the establishment of charging stations for electric cars to enhance the sales of electric vehicles. EV Charging as a service at the workplace can be a crucial opportunity for EV drivers who do not have easy access to home charging stations. Workplaces are most likely to install fast chargers. Moreover, a rapidly growing need for EV Charging services in the commercial sector has emerged due to the increasing purchasing power & infrastructure in developing economies.

A charging App is a cloud-based software for the management, monetization, and operation of electric vehicle charge stations with real-time information for the monitoring

and optimization of EV charging networks. EV charging platforms can enable specialized services and technologies for charging networks, with different functions and modules being made available for home, workplace and public charging. Roaming, smart charging, EV fleet management, and payment solutions for charging sessions can provide businesses with a range of efficient and flexible technologies to maximize their operations.
