The chiller is a key component of the battery thermal management of pure electric or hybrid vehicles. Its function is to introduce the refrigerant in the air conditioning system, evaporate after the expansion valve throttles, and absorb the heat of the coolant in the battery cooling circuit. During this process, the refrigerant passes through the heat exchange takes away the heat of the coolant and plays a role in cooling the battery. Its structure generally consists of a heat exchanger body, an external evaporator, two coolant inlet and outlet pipes (one in and one out), and two refrigerant pipes (one in and one out).
