Fuse refers to an electrical device that uses the heat generated by itself to fuse the melt and disconnect the circuit when the current exceeds the specified value. Fuses are widely used in high and low voltage distribution systems, control systems, and electrical equipment. As short circuit and overcurrent protectors, they are one of the most commonly used protective devices. Automotive fuses are divided into two parts: low voltage and high voltage. The application voltage of automotive low-voltage fuses is generally lower than 60VDC, and electronic fuses are mainly used to protect low-voltage loads in vehicles, such as car lights, window motors, wiper motors, horns, etc. These types of protection are applied in both traditional vehicles and new energy vehicles. High voltage protection is mainly applicable to new energy vehicles, and the

application voltage is generally 60VDC-1500VDC. It mainly uses high-voltage fuses to protect the main circuit and auxiliary circuit.
