## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

In the new energy drive system, the variable frequency drive controls the motor. This is a key component in a car, similar to the engine management system (EMS) of an internal combustion engine car, that determines driving behavior. The variable frequency drive not only drives the electric motor, but also captures the energy released through regenerative braking and feeds it back to the battery. Therefore, the range of the vehicle is directly related to the efficiency of the traction inverter. The new energy vehicle inverter is a key component of the torque vectoring drive unit.

The global market for New Energy Vehicle Variable Frequency Drive is estimated to increase from US\$ million in 2021 to reach US\$ million by 2028, exhibiting a CAGR of % during 2022-2028. Keeping in mind the uncertainties of COVID-19 and Russia-Ukraine War, we are continuously tracking and evaluating the direct as well as the indirect influence of the pandemic on different end use sectors. These insights are included in the report as a major market contributor.

The APAC New Energy Vehicle Variable Frequency Drive market is expected at value of US\$ million in 2022 and grow at approximately % CAGR during 2022 and 2028.
