The global NFC Controller market size is predicted to grow from US\$ 2451 million in 2025 to US\$ 5037 million in 2032; it is expected to grow at a CAGR of 10.9% from 2026 to 2032.

An NFC Controller is a semiconductor device responsible for managing Near Field Communication (NFC) functions in electronic devices. It acts as the central processing unit for NFC operations, enabling devices to communicate over short distances (typically less than 10 cm) using radio frequency signals. These controllers handle tasks such as initiating communication, data encoding/decoding, and protocol compliance with ISO/IEC 14443 and ISO/IEC 18092 standards. NFC controllers are commonly integrated in smartphones, wearable devices, contactless payment terminals, smart cards, and IoT devices. In 2025, global NFC controller production reached approximately 1.67 billion units, with an average global market price of around US\$ 1.50 per unit. Annual production capacity is 1.90 billion units. Gross Profit Margin: 25%. The NFC controller industry chain includes upstream semiconductor design and manufacturing, midstream module integration, and downstream device application. Upstream, companies focus on NFC chip design and fabrication, sourcing high-quality silicon wafers and packaging materials. Midstream involves embedding the NFC controller into modules, often combining it with secure elements for payment or authentication functions. Downstream applications include smartphones, POS terminals, smartwatches, public transportation cards, and access control systems. The ecosystem is highly dependent on smartphone manufacturers and IoT device makers. NFC controllers are crucial for enabling seamless, secure, and convenient short-range communication in modern electronics. With the growth of mobile payments, contactless ID cards, and smart home devices, demand for efficient NFC controllers is rising. However, the technology is mature, so differentiation largely comes from power efficiency, integration capabilities, and security features. I believe the future trend will focus on ultra-low power NFC for wearables and hybrid controllers that support multiple

wireless protocols in a single chip.

United States market for NFC Controller is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
