NFC (Near Field Communication) and WPC coils are two common concepts in the fields of wireless communication and charging. The NFC is a short-range, high-frequency wireless communication technology used for short-range data transmission between devices. WPC coils refer to a wireless charging coil that complies with the Wireless Power Consortium standard. It can perform electromagnetic induction coupling with other compatible wireless charging devices, transmit power from the charger to the charged device, and achieve wireless charging.

NFC and WPC coils differ in application and working principle. NFC coils are mainly used for near field communication and data transmission, while WPC coils are mainly used for wireless charging. Although both work in the form of coils, their frequencies and application fields are different. In practical applications, appropriate technology and equipment need to be selected according to specific needs.
