The global NFC-SIM Chip market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

The NFC-SIM chip is a chip that integrates NFC functions into the SIM card. It allows mobile phones without NFC modules to realize some NFC functions, such as mobile payments, bus cards, etc. The principle of the NFC-SIM chip is to use the SWP (Single Wire Protocol) interface of the SIM card to transmit the NFC signal to the antenna of the mobile phone through a single-wire connection between the SIM card and the mobile phone, thereby realizing NFC communication. The advantage of the NFC-SIM chip is that it can save the space and cost of mobile phones and increase the popularity of NFC. However, the disadvantage is that it requires the support of operators, and the functions and performance of NFC are limited by the capacity and speed of the SIM card.

United States market for NFC-SIM Chip is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for NFC-SIM Chip is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
