The global Nickel Coated Steel for Cylindrical Lithium Battery Case market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Nickel coated steel is a type of metal used in the manufacturing of cylindrical lithium battery cases. The steel is first coated with a thin layer of nickel, which provides several benefits for the battery. Firstly, the nickel coating provides a barrier between the steel and the electrolyte solution inside the battery, preventing corrosion and degradation of the steel over time. This helps to ensure the long-term performance and safety of the battery. Secondly, the nickel coating improves the conductivity of the battery case, allowing for more efficient transfer of electrical current between the battery's electrodes and external circuitry. This results in higher battery efficiency and performance. Finally, the nickel coating provides mechanical strength and durability to the battery case, protecting the battery from physical damage and deformation during use and handling.

China's policy on lithium-ion batteries mainly focuses on lithium-ion batteries. In 2015, in order to strengthen the management of lithium-ion battery industry and improve the development level of the industry, China formulated the Standard of Lithium-ion Battery Industry. the global sales of new energy vehicles reached 10.8 million units in 2022, with a year-on-year increase of 61.6%. In 2022, China new energy vehicle sales reached 6.8 million units, and the global share increased to 63.6%. In Q4 2022, sales penetration rate of China's new energy vehicle reached 27%, while the global average penetration rate was only 15%. Europe penetration was 19%, and North America penetration rate was only 6%. Lithium batteries will fully benefit from the high growth of downstream demand. According to the Ministry of Industry and Information Technology, China's lithium-ion battery production reached 750 GWh in 2022, up more than 130

percent year on year. Among them, the output of lithium energy storage battery exceeded 100 GWh, and the total output value of the industry exceeded 1.2 trillion yuan. The industrial application of lithium battery was also growing rapidly. In 2022, the loading capacity of new energy vehicle power battery was about 295 GWh, and the new energy vehicle power battery was about 295 GWh. According to our research, in 2022, the overall global lithium-ion battery shipments were 957GWh, a year-on-year increase of 70%. Global vehicle power battery (EV LIB) shipments were 684GWh, a year-on-year increase of 84%; Energy storage battery (ESS LIB) shipments were 159.3GWh, a year-on-year increase of 140%.
